

Team No REST for the Wicked

11/20/2016

Meeting Agenda

- Progress
 - We will go over the progress report and describe where we are at in our project
- Bundle.js
 - With the setup from fritter-react, it is expected that a bundle.js will be generated. However, for our project, this is not happening
- API Key practices
 - How should we handle the API key for Google Maps for our project? Does this key need to be secret? The calls are made from the frontend so somehow the client needs to be able to use it
