

Team No REST for the Wicked
12/5/2016

Progress Report

- Nish
 - Front End error handling
 - For adding a spot - IN PROGRESS (it's in there, but the errors from the server need to be more consistent for this to work)
 - For logging in - IN PROGRESS
 - For reviews - NOT STARTED
 - User Scenarios
 - List of paths user can take on each page/subpage - IN PROGRESS
 - Done for login
 - Done for register
 - Done for AddASpot subpage
 - In Progress for AddASpotForm subpage
 - Map display update in response to query
 - There is functionality to update map bounds in response to query, but it still needs to be tied with the search results - DONE
- Bob
 - React main files
 - App.jsx, main.js - DONE
 - React pages files
 - Main.jsx, NotFound.jsx, SpotDetails.jsx - DONE
 - SpotDetails needs to support writing reviews - DONE
 - Need to support deleting spots - in progress
 - Need to support deleting/upvoting/downvoting reviews - requires services/routes
 - Need to add Profile page - DONE
 - React elements files
 - AddASpot, AddASpotForm, NavBar, SearchResults - DONE
 - Need CSS to fix width of left div - DONE
 - Need to make star rating display stars instead of "X / 5 stars" - Have CSS code
 - Works with other parts of app
 - Need to make sure everything works together (with routes and with map) - DONE
- Isaac
 - Rep
 - Users now have a rep
 - Rep automatically updates upon creating a spot
 - Rep updates based on upvoting and downvoting of reviews

- Spot
 - Users can now delete spots they have created within 24 hours
 - TODO: Automatic deletion of invalid spots
- Testing
 - Created model tests for Tags
 - TODO: Create tests for Spots
 - TODO: Create tests for Reviews
- Maryam
 - Authentication
 - Use bcrypt instead of PassportJS because there were too many issues
 - Deployment
 - Deploy the application onto Heroku
 - Create .slugignore file to ignore unnecessary files such as team_documents and tests
 - Create environment variable so that we don't have to manually change the URL before deploying to Heroku
 - Updated the routes and services based on changes to models
 - Work on error handling from the backend
 - Slowly working through code to ensure that use cases can be fulfilled
 - Testing
 - TODO: Update test cases to work with the updated routes and models
 - Helped set up testing environment for models
