# Purpose

- Where's the good stuff?

# Concept

## Spot

- **Description:** A spot is point of interest that contains information about the type (e.g. bathroom, water fountain), location and reviews
- **Purpose:** To find places of interest that are nearby and high quality
- **Operational Principle:** If a user wants to find a certain kind of spot, they form a query and get a list of spots

# Concept

## ☆ Rep ☆

- **Description:** Rep is a measure of how useful a user's reviews and submitted spots are
- **Purpose:** To reward users for submitting spots and reviews
- **Operational Principle:** If a registered user sees a new location posted and verifies it, she can give rep to the user who posted the location.

# Risks

- People may submit wrong information
- We can't anticipate all "types" of spots that people will be interested in
- Our application relies heavily on crowd-sourced information
- There may be more than one spot submitted for the same point of interest
