

Team No REST for the Wicked
12/05/2016

Meeting Agenda

- Progress Report
 - We will go over the progress report and describe where we are at in our project
- Clarify what should be done by feature freeze
 - Make design decisions and agree as a team on what the application does in all cases
 - Start everything, make sure everything is compatible\
 - Error handling does not fall under this
 - For UX, it doesn't have to look nice but there should be representation of everything
 - Have everything there, but variations later are ok
 - Location queries: having map bounds determine location bounds sounds good
- Should we have an account set up for TAs to use?
 - Whatever we need to demonstrate to Vahid, same format as MVP demo
- Is demo this Wednesday local or deployed?
 - Up to us
 - Local would have more features, deployed more stable
- Show the user scenarios, ask if the format could be improved/ what is the typical format these are in
 - Is it useful for us? Yes
 - Might be more organized if we use steps
- Ask if design should continue to be changed
 - Not required, but if it helps feel free to do it
- Ask about using @mit.edu addresses that dont exist
 - Should we take this into consideration?
 - There are varying levels of how we can address this:
 - Right now is ok for the scope of the project
 - Next step would be email verification link, see Piazza post for recommended module (email-verification)
 - We would not have to do this before Wednesday
 - Could use secret key and hashing in sending an email
 - Could use touchstone, but that's pretty difficult
- Debugging
 - Try using postman
- Progress
 - Features and documentation seem good, UI still needs work
