Team No REST for the Wicked
11/28/2016

Meeting Minutes
- Progress Report
  -
- Demo
  - Focus on flow of actions that a user takes i.e make a list of actions that user can take and where errors can happen
- Ask about feedback so we can do revised design
  - Will receive feedback today
- Ask how necessary react-router is
  - Not necessary
- Ask what he thinks is a good way for users to find spots
  - By function
  - Whats near me
  - Changing map view will get different spots?
- Most people would use the application on mobile, should we consider that?
  - It would make it better, but it's not required for the class. There are prizes for the class though
- Ask what unit tests should be testing (routes? Services? Mongoose methods?)
  - We have tests for services, which are essentially wrappers for the router
    - Functional tests and unit tests
    - Have unit tests for complicated functions that involve more than just a create or read
    - Testing at HTTP level is fine
  - Do we need frontend tests?
    - Manual test and write down steps, what you expect to see, and what happens
- Minimum for auth is salt hash, password storage
  - Email verification could be a higher level goal
- UI
  - Opportunity for cool UI tricks like the drag and drop
  - Could make map full screen
- Bugs
  - It would be useful to track bugs on a google sheet or Github issues
- Feature freeze
  - Was mentioned but not in project deadlines
  - Vahid will ask other TAs and let us know
